EDUCATION

Dr. A.P.J Abdul Kalam Technical University Lucknow

2026

B.Tech(CSE) - **CGPA - 8.7**

Government Polytechnic Bareilly

2022

Diploma in Engineering - **Percentage: 80%**

COURSEWORK / SKILLS

- DSA
- NLP
- Operating Systems
- DBMS
- Machine Learning
- Deep Learning
- Computer Networks

PROJECTS

Fake News Classifier 🔗 | [NLP](#), [Machine Learning](#), [scikit-learn](#), [TfidfVectorizer](#), [Stemming](#)

- **Developed a Fake News Classifier** to classify news articles based on the dataset.
- **Data Set-** Kaggle Fake-news dataset which includes: train.csv (label: 1 = unreliable, 0 = reliable), test.csv, and submit.csv.
- **Stemming** is a text-preparation technique used in search engines, sentiment analysis, and domain analysis.
- **TfidfVectorizer** Used TfidfVectorizer from scikit-learn to convert text into TF-IDF features for model training.

Document Summarizer RAG 🔗 | [GenAI](#), [RAG](#), [LangChain](#), [HuggingFaceEmbeddings](#), [ChromaDB](#)

- **RAG** Retrieval-Augmented Generation is the process of optimizing the output of a large language model. Built a RAG system that accepts any PDF document and generates summarized answers to user queries.
- **Implementing the LangChain** framework for smooth flow of working.
- Added **HuggingFaceEmbeddings** for converting the text into vectors.
- **ChromaDB** was used to store and retrieve text vector embeddings efficiently.

Q-A ChatBot 🔗 | [GenAI](#), [OLLAMA](#), [LangChain](#)

- **Implementing a ChatBot** that works locally (offline) and gives personalized responses.
- **LLM Models** such as Mistral, LLaMA 3.2, and Gemma 2.2B for efficient responses.
- **Ollama** is an open-source tool that lets you run large language models (LLMs) locally on your computer.
- **LangChain** was used for building the LLM chatbot, while **LangSmith** was used for tracking token usage and tracing the flow.

TECHNICAL SKILLS

Languages: Python, Java, SQL

Technologies/Frameworks: Machine Learning , Deep Learning, NLP, scikit-learn, LangChain,HTML5, Flask, MongoDB, ChromaDB, AWS, Git and Github

Developer Tools: VS Code, PyCharm, Jupyter Notebook

CODING PLATFORMS

- [LeetCode](#) 🔗 | including algorithms, data structures, dynamic programming.

CERTIFICATIONS

- Python 🔗
- Machine Learning, DL and NLP 🔗
